Sample Collection and Submission Guidelines for Contagious Equine Metritis (CEM) Testing /*Taylorella* species Culture

Pennsylvania Veterinary Laboratory (PVL) is approved by the USDA for offering bacterial culture for CEM testing.

- Testing requirements vary for import, export and disease trace-back purposes. Please confirm sampling requirements for regulatory testing before specimen submission.
- Please contact the lab prior to sample collection to schedule testing.
- All submissions for CEM testing are considered official; suspect samples will be sent to NVSL for confirmation.
- Cost of culture is \$20.00 per swab with no accession fee.

Specimen Collection

- Rayon swabs are preferred for sample collection. Avoid using calcium alginate swabs.
- Collect swabs from the recommended sampling sites.
 - Open Mares: Clitoral fossa, clitoral sinuses and distal cervix/uterus
 - Pregnant mares: Clitoral fossa, and clitoral sinuses
 - Stallions: Shaft of penis and prepuce, urethral sinus, fossa glandis (urethral fossa), and distal urethra
- Insert swabs deep into tube containing **Amies transport medium with charcoal** with one swab/ tube.
 - Small diameter (~ 2 mm) swabs (e.g. Hardy Diagnostics Cat # 4116BX) for sample collection from clitoral sinuses, and double guarded long (~ 33") uterine culture swabs for cervical samples are needed. If needed, limited quantities of sampling supplies can be ordered from NVSL (Tel # 515-337-7565; E-mail: NVSL_concerns@aphis.usda.gov; www.aphis.usda.gov/nvsl).

Sample Shipment

- Ship swabs in the transport media with enough ice packs to PVL.
- A completed submission form showing the collection date must accompany samples. The CEM submission form can be accessed online at www.padls.org.
- Samples must arrive at the laboratory promptly to allow setting up of culture within 48 hours after collection.

Reporting

- Negative culture results are reported after 7 days.
- Samples suspected for *Taylorella* species are sent to NVSL for final confirmation.
- Another set of samples are requested if samples are not suitable for testing or if overgrowth of contaminants is observed.
